**LASER GUIDED KIT**

STRIKE WITH PERFECTION

[www.qaswaindustries.com](http://www.qaswaindustries.com)

# LGK-50

LGK converts general purpose MK-80 bomb into a precision guided munition by introducing laser guidance. The kit consists of:

- Computer Control Group (CCG) for guidance and control (option is available for a tail end computer control group).
- Wing assembly attached to the aft end to provide lift and stability.

# SALIENT FEATURES

- Uses semi-active laser guidance to strike a designated target with greater accuracy than an unguided bomb.
- All weather weapon.
- It has an internal semi active guidance system that detects laser energy and guides the weapon to a target illuminated by an external laser source. (Designator can be located in the delivery aircraft, another aircraft or a ground source.)
- Developed in accordance with MIL-STD's.
